IRMA = I Reveal My Attributes

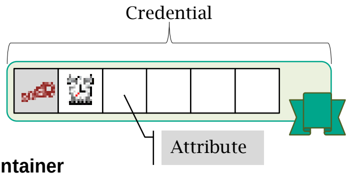
- **System:**
  - Attribute based credentials
  - Smart card based
  - Privacy-friendly & secure
  - Open source
- **User**
  - In control
- **Infrastructure**
  - Open…
  - … but with governance

Radboud University Nijmegen TNO SURF NET

Attribute based credentials (ABC)

Proving an attribute about yourself (age, nationality, preference, …) without revealing your full identity

Credential

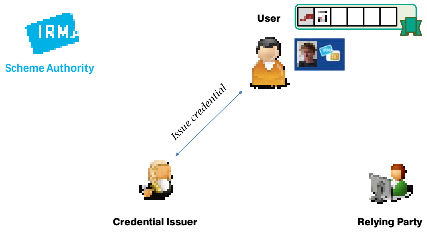


- **Secure container**
- **Issued and signed by *credential issuer***
- **Contains attributes, *selectively disclosable***

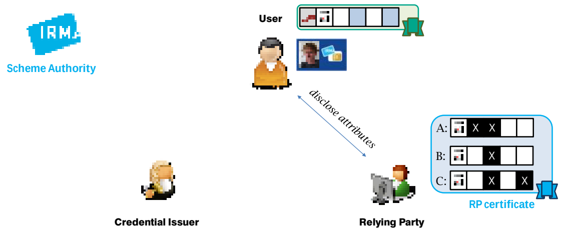
Using such credentials

- **Anonymous**
  - Concert tickets (>16,>18,event,seq. no)
  - Age verification (>16, >18 or <60, <65)
  - Public transport year/track pass (type, period,class)
- **Pseudonymous**
  - Loyalty card (card number)
  - Online newspaper member (membership type, number)
  - Role based access control (military rank, clearances)
- **Identifying**
  - Passport-like (name, BSN, address)
  - Student card (student number, institute)
  - Emergency health info (name, blood group, allergies)

IRMA: issuing a credential



IRMA: disclosing some attributes



ABC Properties

- **Unforgeable**
- **Unlinkable**
  - Issuing with disclosing, and
  - Between two disclosures
- **Revocable**
- **Non transferable**
- **(Inspectable)**

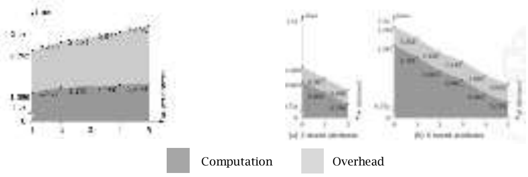
The IRMA card (outside)

- **Outside**

- **Contactless**
  - NFC phones/tablets as terminals
- **Inside**
  - Multos
  - SmartMX (NXP) is option
- **Credentials**
  - Idemix (by IBM)
  - 1024 bit

IRMA card Performance

- **Issuance**
- **Showing**



FULL on card implementation

The IRMA terminals

IRMA Applications

- **Verifiers**
  - Running on tablets
  - And even a PoS terminal
- **Card proxy**
  - Using NFC phone as card reader
  - To sign in to websites using attributes
- **Card management app**
  - View and delete credentials
  - Manage PIN codes
  - View logs

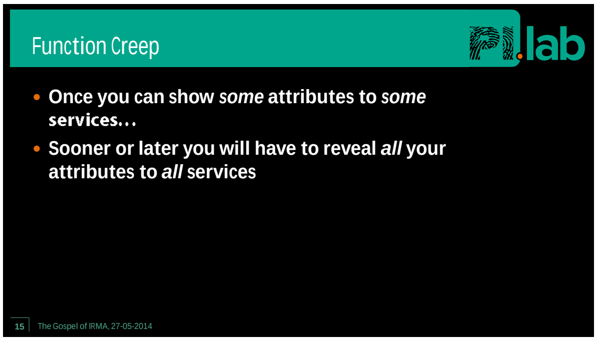
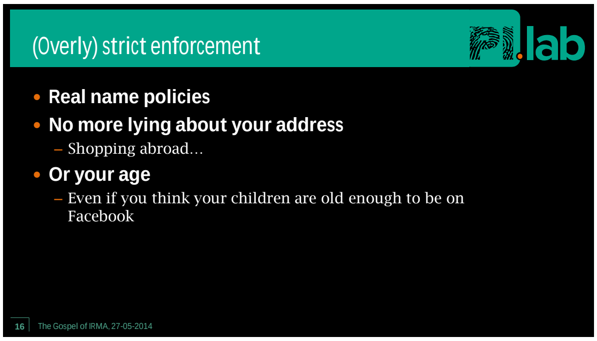
Relying Party

William Hogarth: Satan, Sin and Death (A Scene from Milton's 'Paradise Lost'), c.1735-40 , © Tate, London [2013]



Function Creep

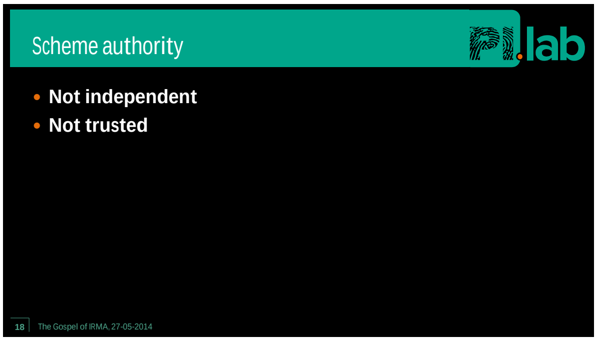
- Once you can show *some* attributes to *some* services…
- Sooner or later you will have to reveal *all* your attributes to *all* services



(Overly) strict enforcement

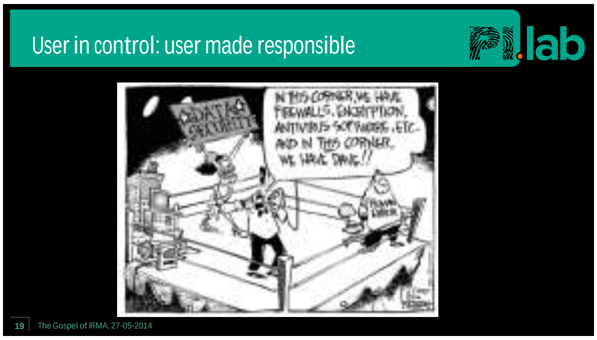
- Real name policies
- No more lying about your address
  - Shopping abroad…
- Or your age
  - Even if you think your children are old enough to be on Facebook

Tracking



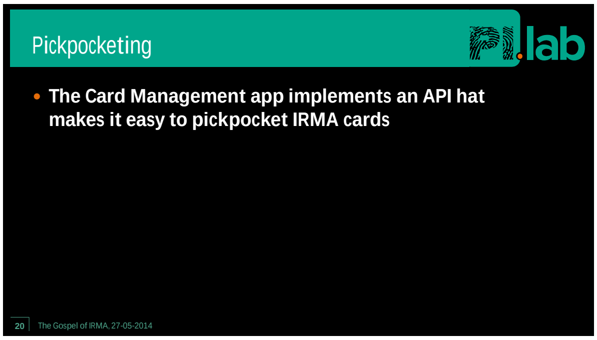
Scheme authority

- Not independent
- Not trusted



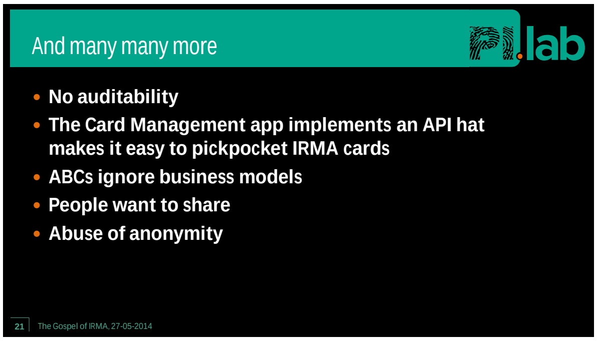
User in control: user made responsible

DATA SECURITY
IN THIS CORNER, WE HAVE FIREWALLS, ENCRYPTION, ANTIVIRUS SOFTWARE, ETC. AND IN THIS CORNER, WE HAVE DAVE!!
HUMAN ERROR



Pickpocketing

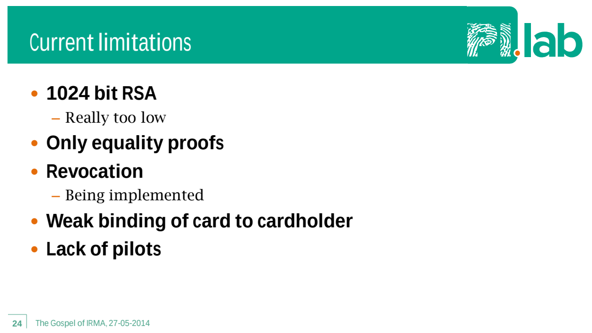
- **The Card Management app implements an API hat makes it easy to pickpocket IRMA cards**



And many many more

- **No auditability**
- **The Card Management app implements an API hat makes it easy to pickpocket IRMA cards**
- **ABCs ignore business models**
- **People want to share**
- **Abuse of anonymity**

eID everywhere



Current limitations

- **1024 bit RSA**
  - Really too low
- **Only equality proofs**
- **Revocation**
  - Being implemented
- **Weak binding of card to cardholder**
- **Lack of pilots**

Thank you.
