

# KEYSTROKE DYNAMICS

2FA in web apps

## Authentication

It's me.

Prove it!

An authentication factor is a category of credential that is intended to verify, sometimes in combination with other factors, that an entity involved in some kind of communication or requesting access to some system is who, or what, they are declared to be.

## Authentication factors

something you **know**

something you **have**

something you **are**

An authentication factor is a category of credential that is intended to verify, sometimes in combination with other factors, that an entity involved in some kind of communication or requesting access to some system is who, or what, they are declared to be.

## Authentication factors

something you **know**

password, passphrase, PIN

## Authentication factors

something you **have**

and can **not** be easily duplicated:  
smartcard, token, OTP generator

## Authentication factors

something you **are**

fingerprint, retina, iris  
keystroke dynamics (typing pattern)

Keystroke dynamics or typing dynamics refers to the automated method of identifying or confirming the identity of an individual based on the manner and the rhythm of typing on a keyboard. Keystroke dynamics is a behavioral biometric, this means that the biometric factor is 'something you do'.

## Keystroke dynamics

something you **do**

behavioral biometric

## Keystroke dynamics

typing pattern

dwell time: KeyDown - KeyUp

travel time: KeyDown - KeyDown

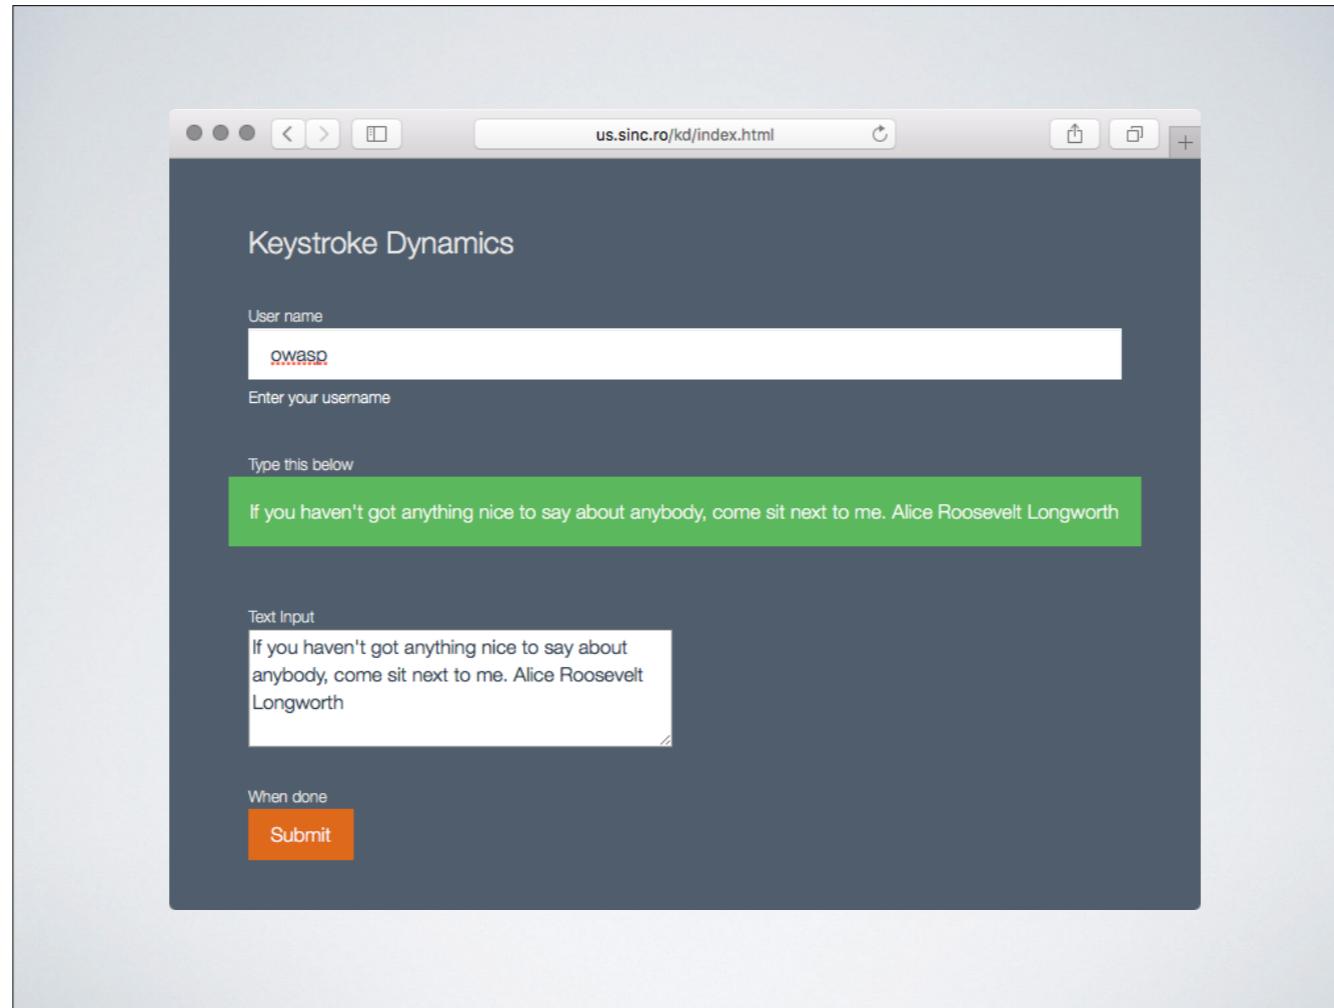

## Keystroke dynamics

+

- uniqueness
- low implementation and deployment cost
- transparency and noninvasiveness
- continuous monitoring and authentication

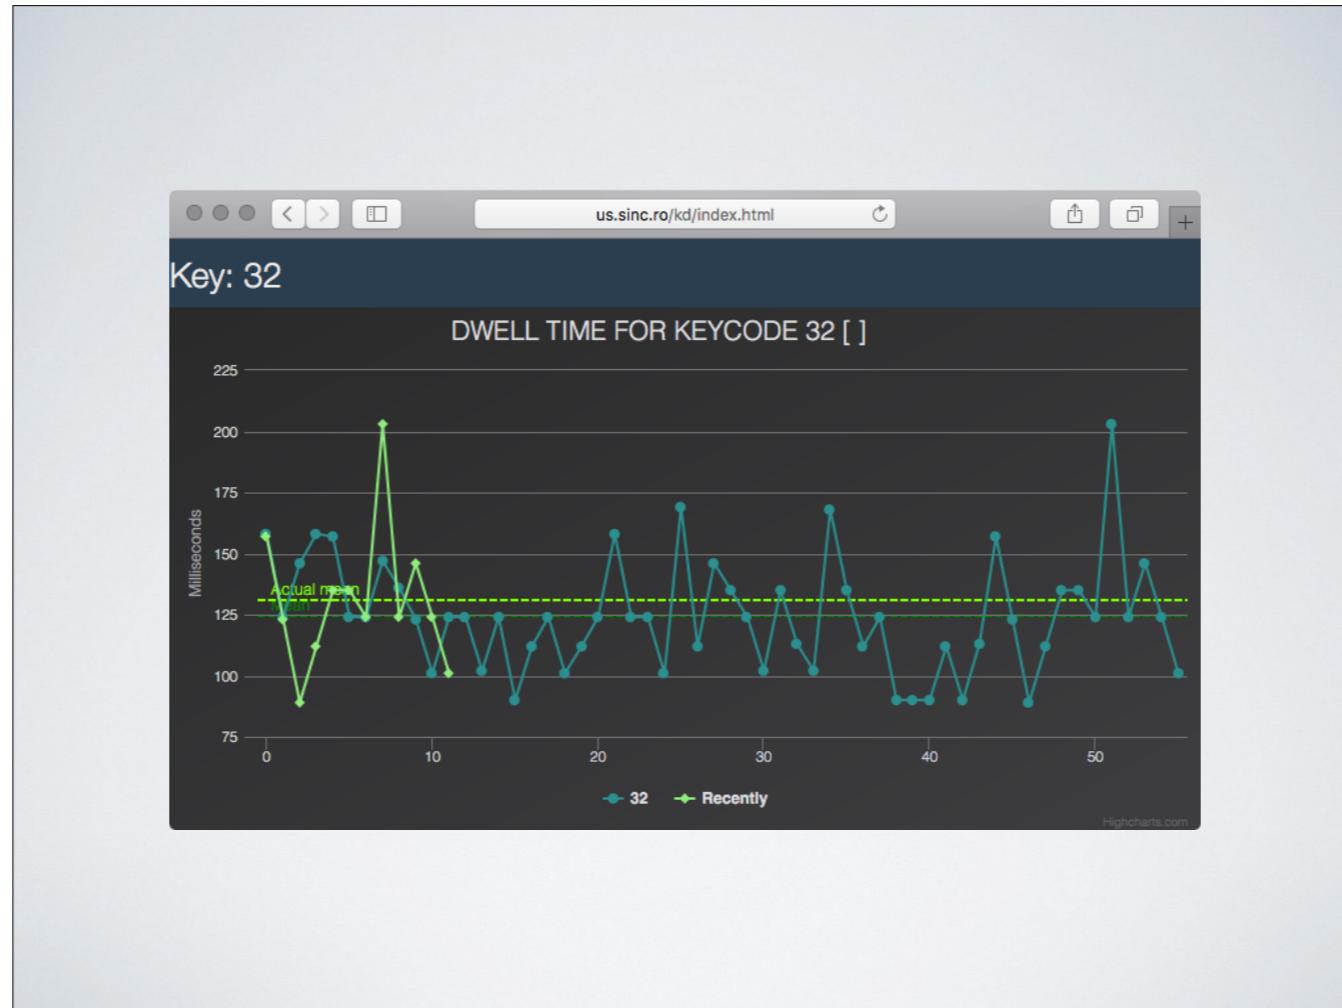

-

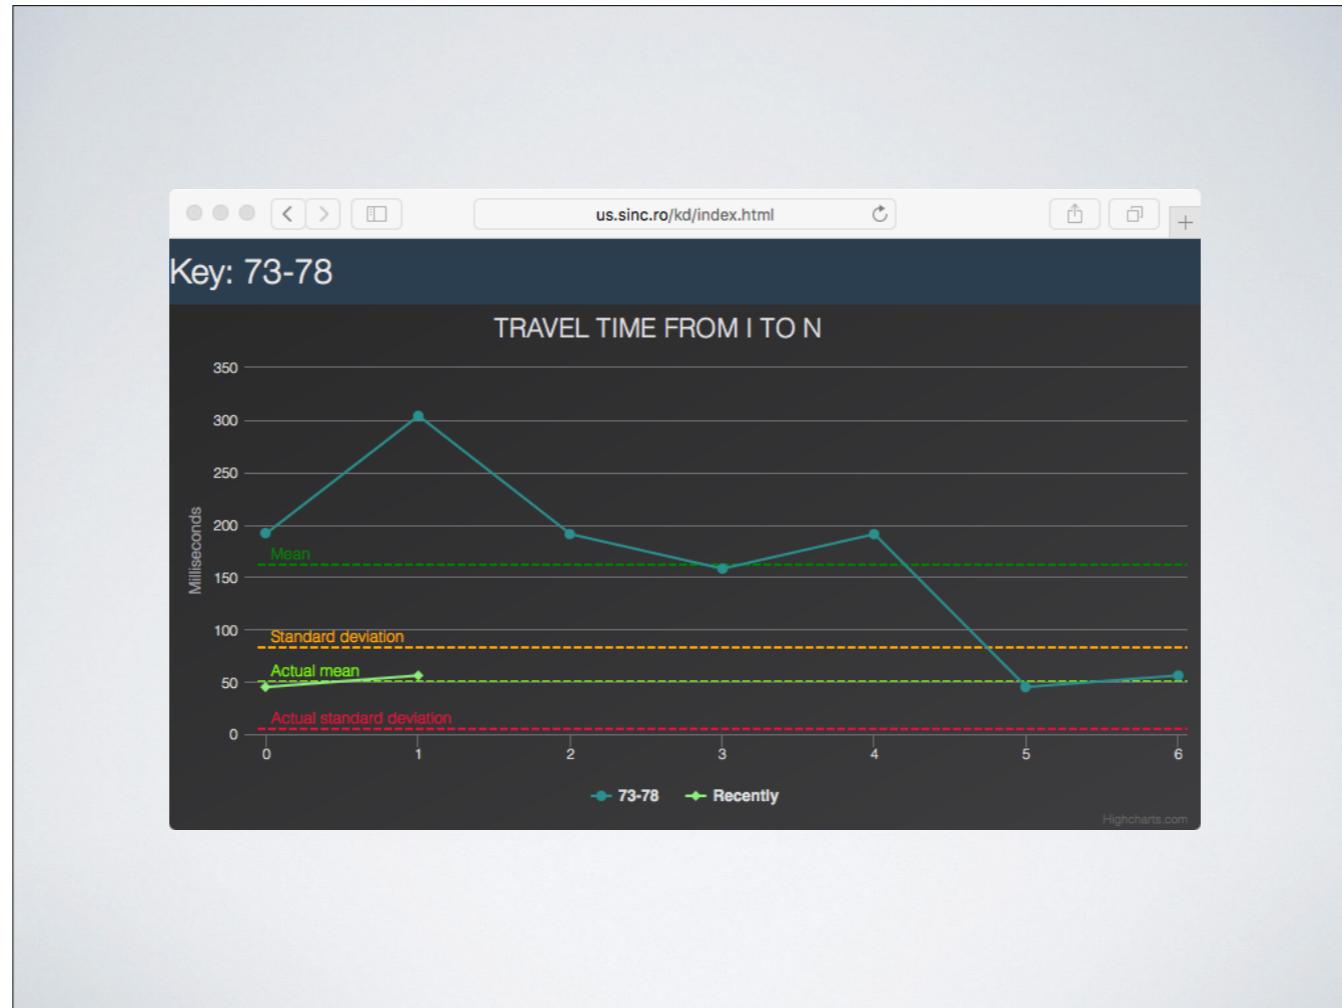

- lower accuracy
- lower permanence

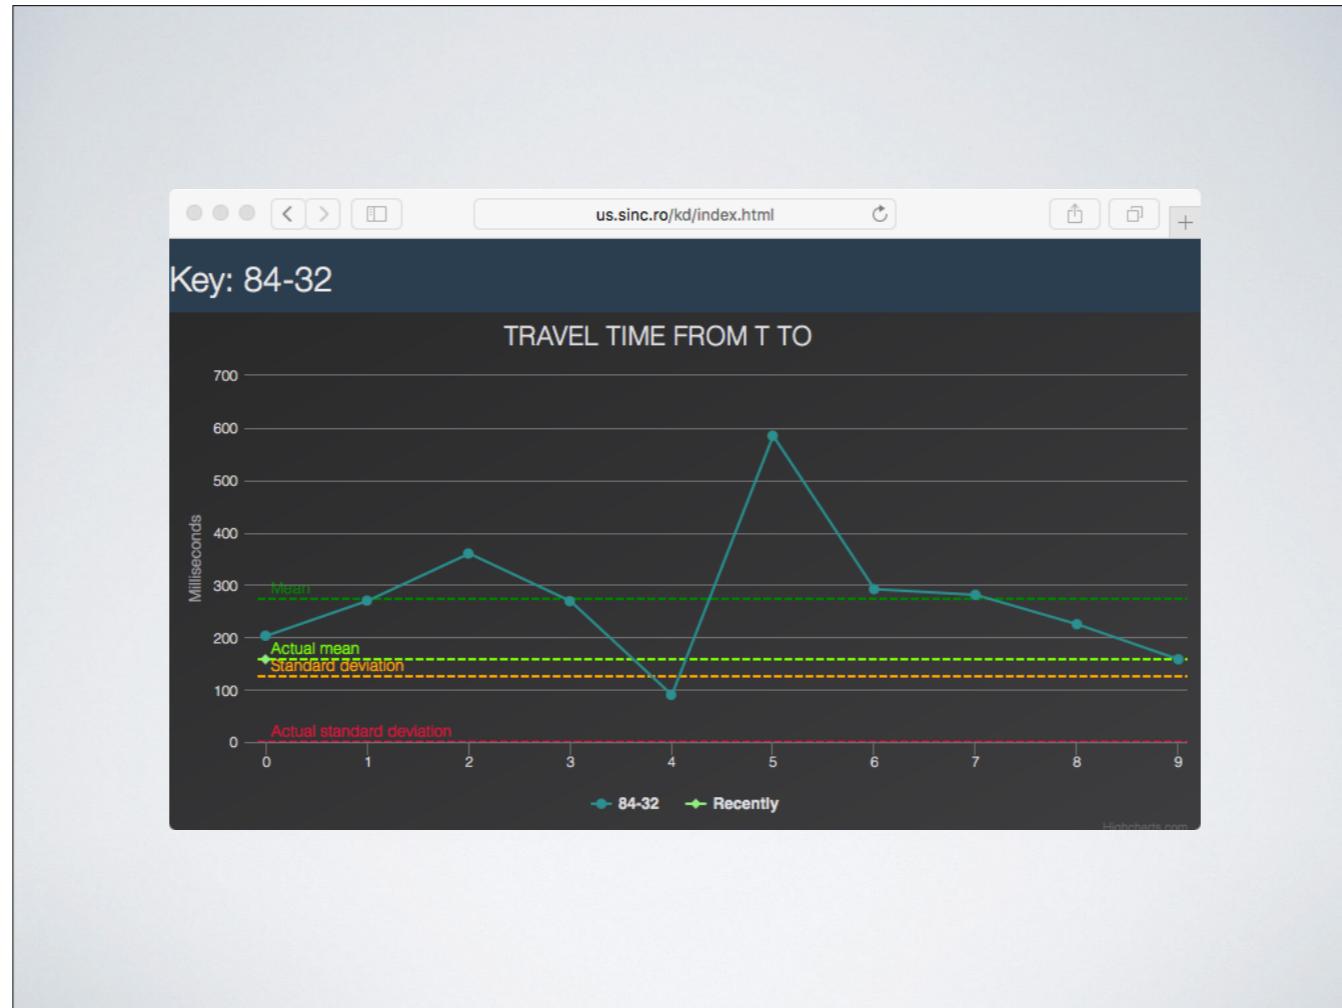

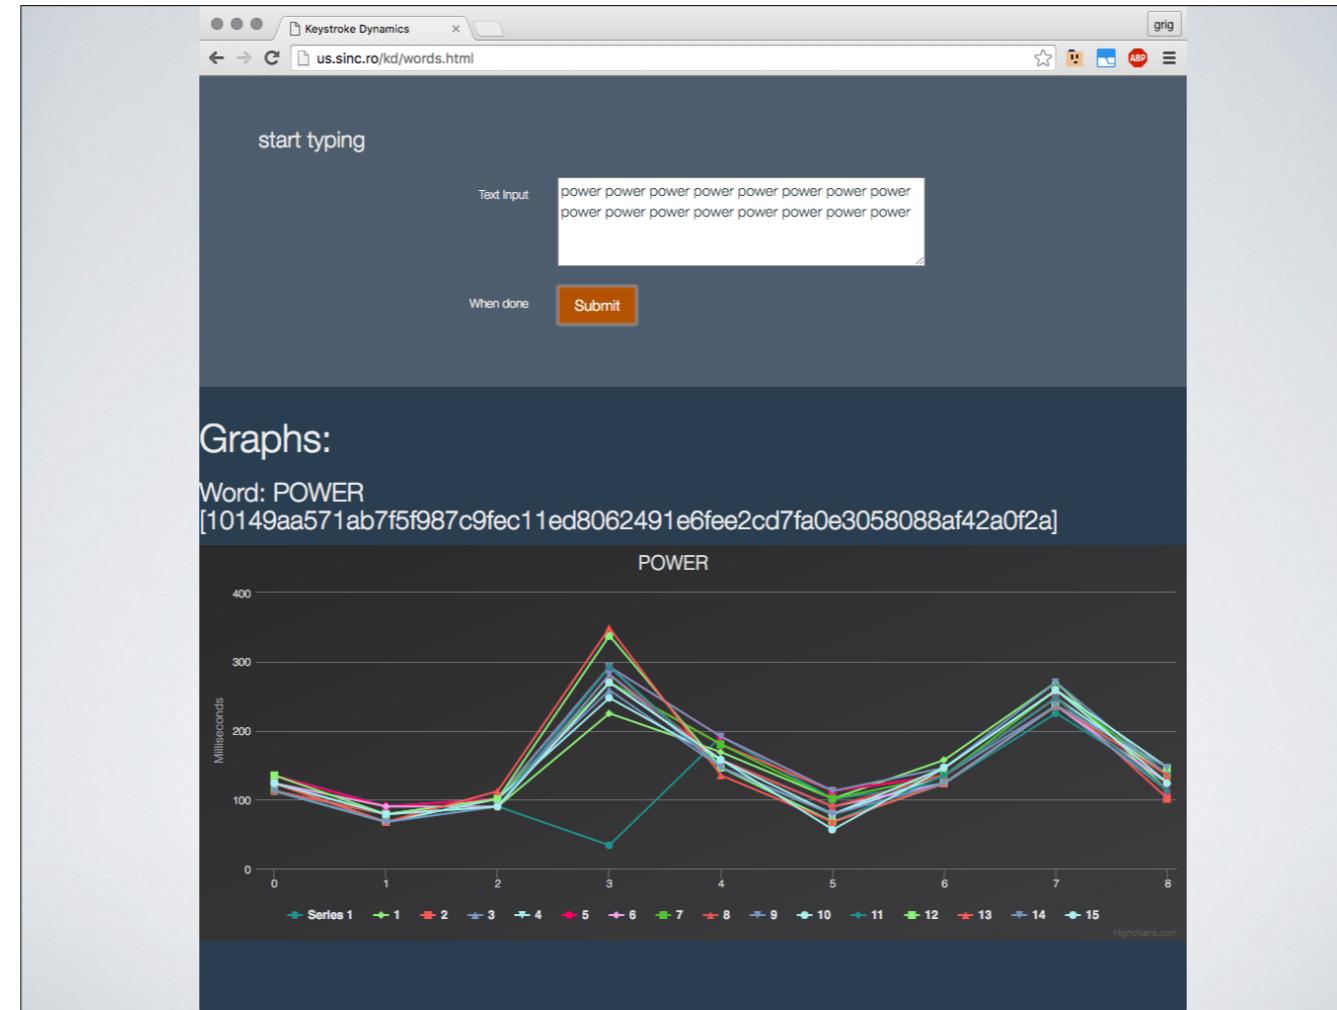

## Keystroke dynamics

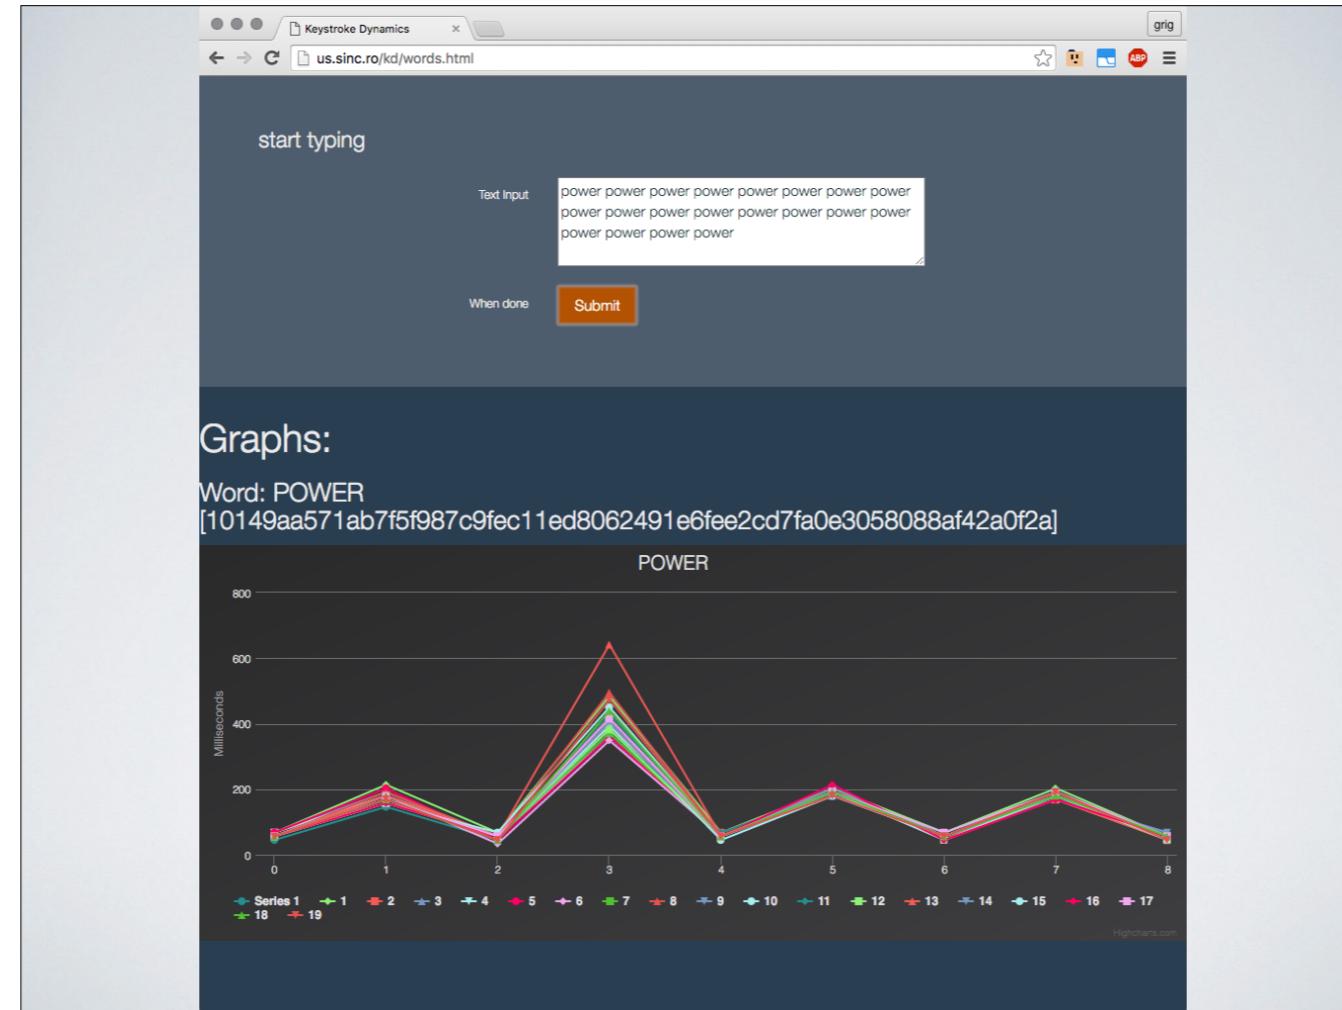

deaf flea

## Keystroke dynamics

brain - notion - word

notion: concept, idea

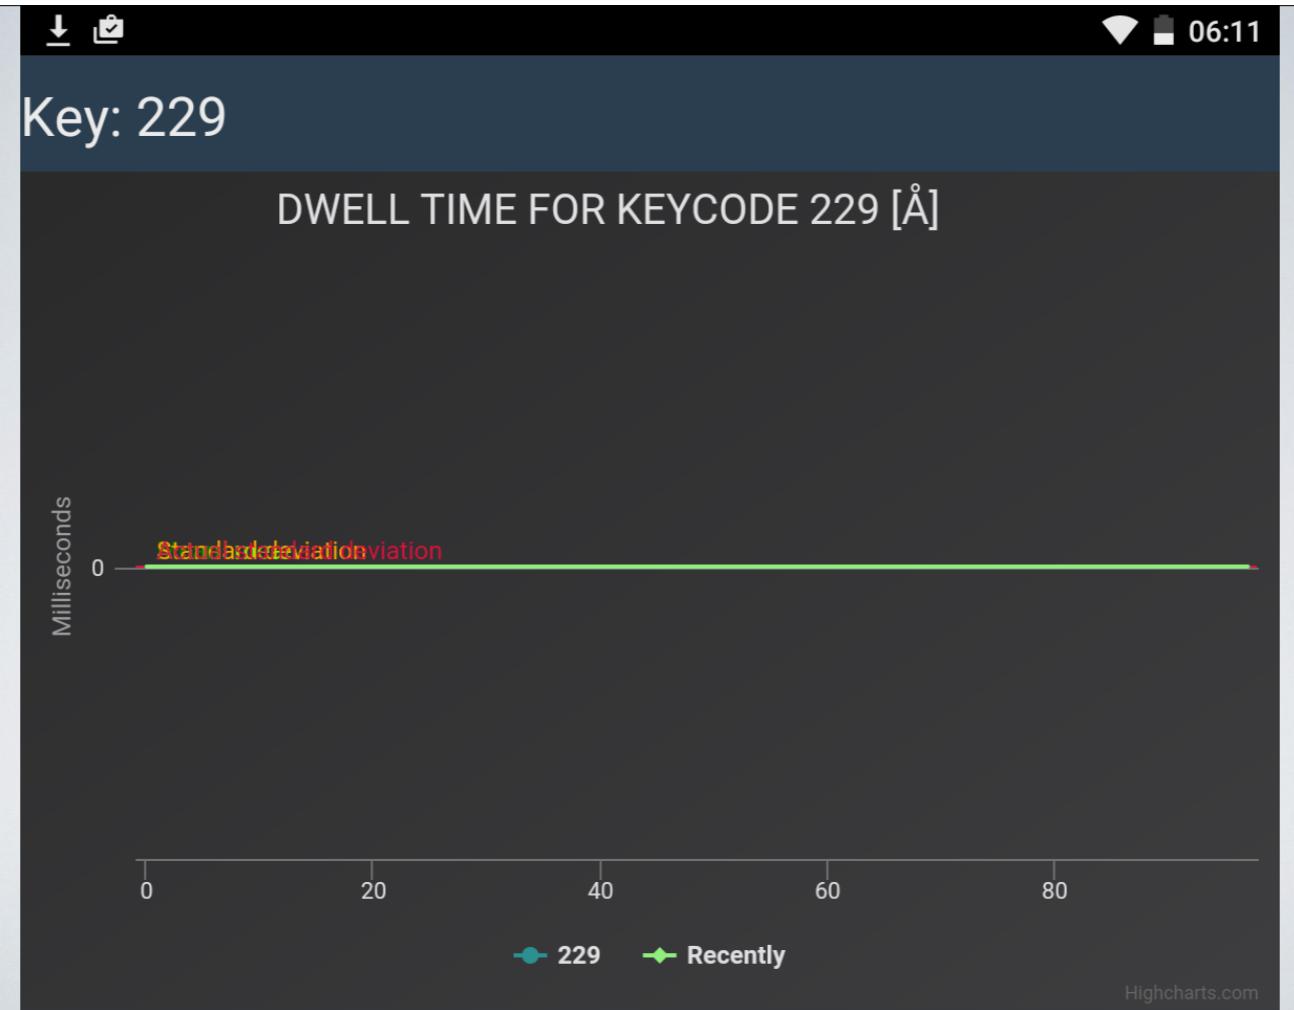

Keystroke dynamics

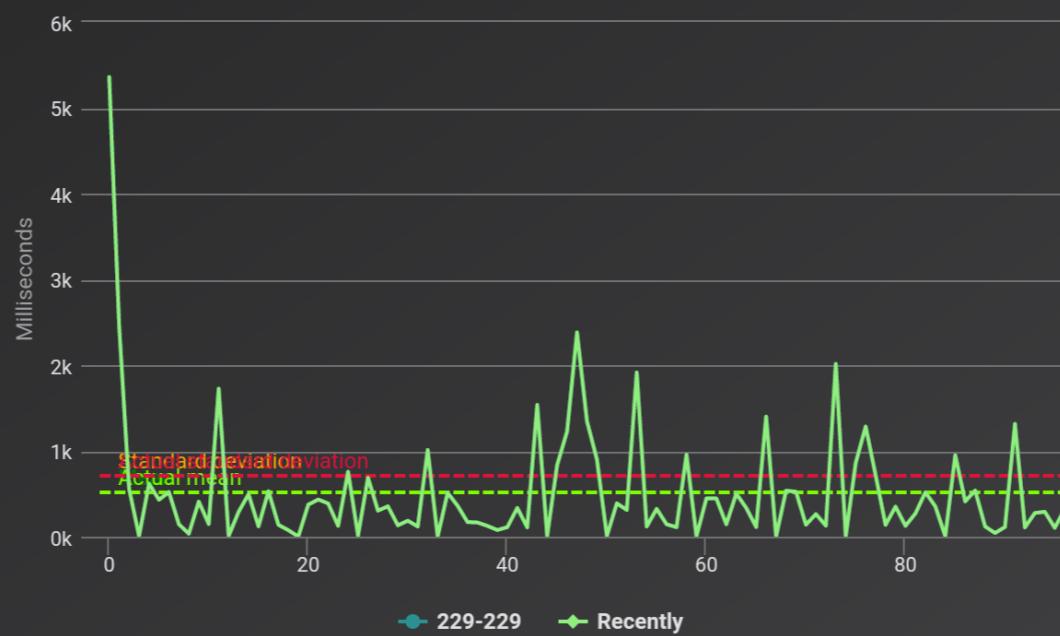

mobile devices: android

# Travel graphs

Key: 229-229

## TRAVEL TIME FROM Å TO Å

## Keystroke dynamics

confidence factor

- tired
- injured
- drunk/drugs
- moody

## Keystroke dynamics

```
$( 'body' ).on( 'keydown', function(evt) {  
    var key = evt.keyCode;  
});  
  
$( 'body' ).on( 'keyup', function(evt) {  
    var key = evt.keyCode;  
});
```

## Keystroke dynamics

### Possible uses

- enhance authentication
- detect user change
- identify trolls

Keystroke dynamics

Countermeasures

typing pattern randomization

hardware: FPGA

software: keyboard driver

THE END
