OWASP

The Open Web Application Security Project

USA vs Iran - STUXNET

HOW STUXNET WORKED

1. infection

Stuxnet enters a system via a USB stick and proceeds to infect all machines running Microsoft Windows. By brandishing a digital certificate that seems to show that it comes from a reliable company, the worm is able to evade automated-detection systems.

2. search

Stuxnet then checks whether a given machine is part of the targeted industrial control system made by Siemens. Such systems are deployed in Iran to run high-speed centrifuges that help to enrich nuclear fuel.

3. update

If the system isn't a target, Stuxnet does nothing; if it is, the worm attempts to access the Internet and download a more recent version of itself.

4. compromise

The worm then compromises the target system's logic controllers, exploiting "zero day" vulnerabilities—software weaknesses that haven't been identified by security experts.

5. control

In the beginning, Stuxnet spies on the operations of the targeted system. Then it uses the information it has gathered to take control of the centrifuges, making them spin themselves to failure.

6. deceive and destroy

Meanwhile, it provides false feedback to outside controllers, ensuring that they won't know what's going wrong until it's too late to do anything about it.

OWASP Broken Web Applications Project

OWASP Broken Web Applications Project is...

Introduction

A collection of vulnerable web applications that is distributed on a Virtual Machine.

Chuck Willis

What is Broken Web Applications Project?

OWASP Broken Web Applications Project provides:

- A collection of purposefully vulnerable applications to safely practice penetration testing.

OWASP

The Open Web Application Security Project

owaspbwa

OWASP Broken Web Applications Project

This is the VM for the [Open Web Application Security Project \(OWASP\) Broken Web Applications](#) project. It contains many, very vulnerable web applications, which are listed below. More information about this project can be found in the project [User Guide](#) and [Home Page](#).

For details about the known vulnerabilities in these applications, see <http://sourceforge.net/apps/trac/owaspbwa/report/1>.

!!! This VM has many serious security issues. We strongly recommend that you run it only on the "host only" or "NAT" network in the virtual machine settings !!!

Welcome to the OWASP Broken Web Apps VM

!!! This VM has many serious security issues. We strongly recommend that you run it only on the "host only" or "NAT" network in the VM settings !!!

You can access the web apps at <http://192.168.133.128/>

You can administer / configure this machine through the console here, by SSHing to 192.168.133.128, via Samba at \\192.168.133.128\, or via phpmyadmin at <http://192.168.133.128/phpmyadmin>.

In all these cases, you can use username "root" and password "owaspbwa".

ANATOMIA DO PROGRAMADOR

Informatica programatorum

Cabelo "Twilight Zone" - Só é necessário deixar os dias passados em frente ao monitor.

Corpo com grande concentração de lípidos. O programador consome por dia 3 vezes o seu peso em comida de plástico.

Cabelo e barba estilo desleixo - Não é tempo para cortes de pelagem.

Camisa do torneio de Quake - o bom programador participa em média 15 torneios de Quake por ano.

Pequenos filhos. Excepto o pelagem facial, não existem muitos mais pelos. No entanto sabe-se que são mamíferos.

Pernas frágiles. Este animal só utiliza as pernas pois a sua locomóção é nula.

Mouse de extinção. O programador não conhece espécies animais por isso adora objectos seus queridos.
