

**ALGARVE, PORTUGAL, November 7, 2008** – The Open Web Application Security Project (OWASP) today announced results from the annual OWASP Summit. Over 80 application security experts from over 20 countries joined forces to identify, coordinate, and prioritize our 2009 efforts to create a more secure Internet.

OWASP is a free and open community that focuses on improving application security. There is overwhelming evidence that the vast majority of web applications contain security holes that are increasingly putting people and organizations at serious risk. Securing web applications is an extraordinarily difficult technical challenge that demands a concerted effort.

“OWASP came together for a week and produced a stunning amount of new ideas,” said OWASP Chair Jeff Williams. “Our community is growing and organizing into a powerful movement that will affect software development worldwide. This summit marks a major milestone in our efforts to improve application security.”

Key results from the OWASP Summit include:

- **New Free Tools and Guidance** - OWASP announced the release of Live CD 2008, many new testing tools, static analysis tools, the Enterprise Security API (ESAPI v1.4), AntiSamy, the Application Security Verification Standard (ASVS), guidance for Ruby on Rails and Classic ASP, international versions of our materials, and much more.
- **New Outreach Programs** – OWASP has expanded its outreach efforts by building relationships with technology vendors, framework providers, and standards bodies. In addition, we piloted a new program to provide free one-day seminars at universities and developer conferences worldwide.
- **New Global Committee Structure** – OWASP recognized the extraordinary contribution of our most active leaders by engaging them to lead a set of seven new committees. Each democratically established committee will focus on a key function or geographic region, such as OWASP projects, conferences, local chapters, and industry outreach.

The full results of the summit will be captured and released as a report from OWASP in the next few weeks. We will put these results out for comment within 60 days and then ratify them 30 days after. For more information about all the activities and accomplishments at the OWASP Summit, please visit [www.owasp.org](http://www.owasp.org).

The Open Web Application Security Project (OWASP) is a worldwide free and open community focused on improving the security of application software. Our mission is to make application security visible, so that people and organizations can make informed decisions about application security risks. Everyone is free to participate in OWASP and all of our materials are available under a free and open software license. The OWASP Foundation is a 501c3 not-for-profit charitable organization that ensures the ongoing availability and support for our work. Find out more at <http://www.owasp.org>.

**OWASP is proud to launch the following new or updated tools:**

- Application Security Verification Standard, Mike Boberski
- AppSensor, Michael Coates
- Access Control Rules Tester, Andrew Petukhov
- AntiSamy .NET, Arshan Dabirsiaghi
- Application Security Tool Benchmarking Environment and Site Generator refresh, Dmitry Kozlov
- Code Crawler, Alessio Marziali
- JSP Testing Tool, Jason Li
- Live CD 2008 Project, Matt Tesauro
- OpenPGP Extensions for HTTP - Enigform and mod\_openpgp, Arturo 'Buanzo'
- Orizon Project, Paolo Perego
- Python Static Analysis, Georgy Klimov
- Skavenger, Matthias Rohr
- Teachable Static Analysis Workbench, Dmitry Kozlov & Igor Konnov

**OWASP is proud to launch the following new or updated documents or resources:**

- Application Security Desk Reference (ASDR), Leonardo Cavallari
- Backend Security Project, Carlo Pelliccioni
- Classic ASP Security Project, Juan Carlos Calderon
- Code review guide, V1.1 Eoin Keary
- Education Project, Martin Knobloch
- Internationalization Guidelines-Spanish Project, Juan Carlos Calderon
- Positive Security Project, Eduardo V. C. Neves
- Ruby on Rails Security Guide v2, Heiko Webers
- Securing WebGoat using ModSecurity, Stephen Craig Evans
- Source Code Review Projects, James Walden
- Testing Guide v3, Matteo Meucci

OWASP  
EU Summit  
Portugal

SETTING THE APPSEC  
AGENDA FOR '09  
3-7 November

We the undersigned **OWASP BOARD MEMBERS** subscribe to the conclusions of the  
OWASP EU Summit Portugal 2008
