18:30 - 19:00: Registration & Sandwiches

19:00 - 19:30: Intro and OWASP Netherland and Foundation Updates

Retrospective 2013

OWASP Conferences and event 2014

19:15 - 20:00: "Security as part of Quality Assurance" – Boy Baukema

How can you be sure your application is 'secure'? Or 'secure enough'?

The answer off course, is Security Testing. But which kind of testing? How much? When? By whom? How? And most important to the customer / manager: how much is it going to cost. In this talk I'll be presenting the 'Application Security Verification Standard 2013' (ASVS) by the OWASP Foundation. A comprehensive framework for determining a security 'level' and steps to take to 'verify' this level. With this tool you'll be able to answer all the questions above. I'll also talk briefly on how it integrates with a Secure Software Development Lifecycle at Ibuildings .

Boy is a Senior Software Engineer of 10+ years @ Ibuildings.nl, a web and mobile development organization behind sites like nu.nl, kieskeurig.nl and rtlnieuws.nl. As in-house WebAppSec specialist he is responsible for implementing a SDLC and verifying the security of all delivered projects.

20:00 - 20:15: Break

20:15 - 21:00 "Don't be a tool's fool" – Dave van Stein

Tools are important to both hackers and security testers, but they are not 'the silver bullet'. You need to understand the limitations of tools in order to get the most efficiency out of them. In this presentation some tips and tricks for well-known tools will be shown to get you started getting the right mind-set in using them.

Dave van Stein is principal consultant security at KZA bv. He has more than 13 years of experience in software and acceptance testing and started specializing in Web Application Security in the beginning of 2008. Over the years Dave has gained experience with many open source and commercial testing tools and has grown a special interest in the more technical testing areas and virtualization techniques. Dave is an active participant in the Dutch OWASP chapter and has certifications for ISEB/ISTQB, C|EH, and GWAPT.

21:00 - 21:30 Networking

The OWASP Netherlands Chapter is sponsored by
