

Wong Onn Chee

Onn Chee is currently working as the Chief Technology Officer in Resolvo Systems, a leading information leakage expert in Asia. He has led numerous large-scale projects, primarily in the government and defence sectors. His areas of expertise include information leakage protection, web security and security strategy. Onn Chee is also one of the co-inventors for at least six international PCT patents (<http://www.wipo.int>).

Onn Chee was a founding member and the first Vice-President of the Information Systems Security Association (ISSA), Singapore Chapter (<http://www.issa.org.sg>), the largest international, not-for-profit association for security professionals. He contributes regularly to ISSA Journal and has published his works in the area of information leakage protection and application of evidence laws when designing IT systems. He was also a former member of the Center of Internet Security (US) (<http://www.cisecurity.org>) which provides well-recognised security benchmarks for various systems which are commonly used by US Federal Government and private organisations. Onn Chee is also the current Singapore chapter president of Open Web Application Security Project (OWASP) (<http://www.owasp.org/>) and the main organiser of the Security Meetup Group in Singapore. Onn Chee is frequently invited to speak in information security conferences around Asia.

Other than being an information security professional, Onn Chee is also trained in BS 7799/ISO 17799, ISO 9000 and ITIL. He is a certified PRINCE2 Practitioner and was a former certified Project Management Professional (PMP).

In 2007, Onn Chee was appointed as the President of International Association of Software Architect (IASA), Singapore Chapter.

In 2010, Onn Chee was selected as one of the honorees for ISC2's Asia Pacific Information Security Leadership Achievements - Senior Information Security Professional Category.
